CAREER OBJECTIVE

Electronics and Communication Engineering undergraduate with hands-on experience across embedded systems, IoT, and full-stack software development. Skilled in C, C++, Java, and Python, with practical exposure to microcontroller-based hardware projects as well as web and database-driven applications. Comfortable moving between circuit-level debugging and application-level coding, with a strong analytical mindset and a track record of completing independent and team-based projects end to end. Looking to bring this combined hardware-software perspective to a Project Engineer Trainee or Software Developer role.

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Python, JavaScript

Web & Database: HTML, CSS, JavaScript, React.js, Spring Boot, SQL, MySQL

Embedded Systems & IoT: Arduino, ESP32, UART, I2C, SPI, Sensor Integration

Tools & Platforms: Git, GitHub, Arduino IDE, Proteus, ANSYS HFSS

Core Concepts: OOP, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Microcontrollers, Antenna & Communication Systems

EDUCATION

Sri Krishna College of Engineering and Technology

Bachelor of Engineering (B.E.), Electronics and Communication Engineering | CGPA: 7.55/10.0

2023 – 2027

Coimbatore, Tamil Nadu

Blue Bird Matriculation Higher Secondary School

Higher Secondary (Class XII) | 89%

2021 – 2023

Palladam, Tamil Nadu

PROJECTS

Health Journal App | *Java, Spring Boot, React.js, MySQL*

- Built a full-stack health tracking application with secure user authentication and CRUD-based record management.
- Created modules to log mood, sleep, water intake, exercise, and medication, backed by a responsive dashboard for visualizing trends.

Obstacle Avoiding Car | *Ultrasonic Sensors, Microcontroller*

- Built an autonomous obstacle-avoiding robotic vehicle as part of a team, using ultrasonic sensors for real-time obstacle detection.
- Implemented automatic navigation and collision-avoidance logic, improving real-time decision-making and movement efficiency.

Multiband Microstrip Patch Antenna Design and Analysis | *ANSYS HFSS, FR4 Substrate*

- Designed and simulated a multiband antenna for 5G C-band and satellite communication, achieving resonant frequencies at 3.8, 4.1, and 4.9 GHz.
- Optimized performance to a return loss of -28 dB and gain of ~4.5 dBi through iterative simulation and radiation pattern analysis.

EXPERIENCE

NLC India Limited

Intern — Power Systems & Industrial Automation

May 2025 – June 2025

Neyveli, Tamil Nadu

- Studied the operating principles and communication architecture of Remote Terminal Units (RTUs) used in switchyard monitoring and control.
- Observed SCADA-based systems for real-time data acquisition, monitoring, and supervisory control, gaining exposure to substation automation and electrical protection.

LANGUAGES

Tamil, English, Hindi
